

User Requirements Specification (URS)

HeartPulse Mobile Heart Rate Monitor Application

Document ID	URS-HRPMON-001
Version	1.0
Status	Draft for Testing
Use Note	Sample document for AI traceability matrix testing only.

Purpose

This URS defines user and business requirements for the HeartPulse mobile heart rate monitor application for Android and iOS. The application is intended for wellness monitoring sample validation testing.

Requirements / Procedure Details

URS ID	Title	Requirement Description	Risk	Priority
URS-001	User Registration and Secure Login	The mobile application shall allow authorized users to register and securely login using email or mobile number and password with optional biometric authentication on Android and iOS.	High	Must Have
URS-002	Heart Rate Measurement Capture	The application shall capture heart rate readings in beats per minute using a connected wearable sensor or supported camera-based measurement method.	High	Must Have
URS-003	Real-Time Heart Rate Display	The application shall display current heart rate value, measurement status, and timestamp in a clear real-time dashboard.	High	Must Have
URS-004	Heart Rate Alert Notification	The application shall notify the user when heart rate values cross configured high or low threshold limits.	High	Must Have
URS-005	Measurement History and Trend View	The application shall store heart rate measurements and display history with daily, weekly, and monthly trend views.	Medium	Should Have
URS-006	Cloud Synchronization	The application shall synchronize approved heart rate records to a secure backend when internet connectivity is available.	Medium	Should Have
URS-007	Report Export	The application shall allow authorized users to export heart rate history reports in CSV or PDF format.	Medium	Should Have
URS-008	Privacy Consent and Data Protection	The application shall capture user privacy consent and protect personal health data during storage and transmission.	High	Must Have
