

Document 1 - URS - Heart Rate Monitor Application

Application: Heart Rate Monitor for Android and iOS

Document state: DRAFT / uncontrolled / deliberately messy for parser testing

Note: This is synthetic test material only. It is not approved medical-device validation content.

Revision table is mixed below; some rows intentionally repeat or omit values.

Version	Date	Author	Change
0.1	2026-05-18	QA/BA	Initial messy draft
1.0?	TBD	SME?	Imported from old template
0.2	missing	AI Test	duplicate version row

This URS captures expected business and user needs for the Heart Rate Monitor mobile application used by patients, caregivers, and clinical support staff. The structure is intentionally messy for AI/RAG and traceability testing.

URS Section 2 - Cover / uncontrolled draft

OCR noisy line

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-002. Owner: Clinical SME. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

URS-002-1: App shall process heart rate data and preserve timestamp/timezone context.

Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-002-01	Manual heart rate entry when device unavailable	Android/iOS	Not ranked	Audit/event record shall be generated where applicable.	Need SME
URS-002-02	Biometric login option	Android	Not ranked	TBD by clinical SME - intentionally incomplete.	Draft
URS-002-03	Handle offline mode	Backend API	Medium	User shall receive clear error message on failure.	Draft

URS Section 3 - Abbreviations mixed list

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-003. Owner: Validation. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

- 1. For iOS only? For Android only? unclear; parser should capture platform if visible.
- 2. Old requirement copied from web portal project - review if still valid.

Unnumbered note - check sensor disconnect behavior during active monitoring.

- 3. For iOS only? For Android only? unclear; parser should capture platform if visible.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-003-01	Capture heart rate from paired device	Cloud Sync	Not ranked	Audit/event record shall be generated where applicable.	Rejected once
URS_3.2	Notification retry and suppression	iOS	TBD	Audit/event record shall be generated where applicable.	Rejected once
URS_3.3	Export readings as PDF/CSV	Backend API	TBD	Data shall be encrypted in transit and at rest.	Draft
URS_3.4	Export readings as PDF/CSV	Android	Not ranked	Result must be visible in mobile UI within expected time.	Rejected once

URS Section 4 - Document purpose

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-004. Owner: QA. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

4. Old requirement copied from web portal project - review if still valid.
5. URS-004-2: App shall process heart rate data and preserve timestamp/timezone context.

Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

- For iOS only? For Android only? unclear; parser should capture platform if visible.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-004-01	Capture heart rate from paired device	Local DB	Low	Result must be visible in mobile UI within expected time.	In Review
URS_4.2	Biometric login option	Bluetooth Sensor	Medium	TBD by clinical SME - intentionally incomplete.	Draft
URS_4.3	Export readings as PDF/CSV	iOS	Medium	Audit/event record shall be generated where applicable.	Pending QA
URS-004-04	Display current BPM with timestamp	Android	High	Result must be visible in mobile UI within expected time.	Draft

URS Section 5 - Scope and non-scope

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-005. Owner: QA. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

- Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.
- For iOS only? For Android only? unclear; parser should capture platform if visible.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS_5.1	Audit user actions	Android	TBD	System shall complete the action without data loss.	Approved?
URS-005-02	Manual heart rate entry when device unavailable	Android	High	User shall receive clear error message on failure.	Draft
URS-005-03	Notification retry and suppression	Backend API	TBD	TBD by clinical SME - intentionally incomplete.	Pending QA

URS Section 6 - System overview

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-006. Owner: QA. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

- Old requirement copied from web portal project - review if still valid.
6. Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.
- Old requirement copied from web portal project - review if still valid.

For iOS only? For Android only? unclear; parser should capture platform if visible.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-006-01	Display current BPM with timestamp	Cloud Sync	High	System shall complete the action without data loss.	Approved?
URS_6.2	Store readings securely on device	Local DB	Not ranked	Result must be visible in mobile UI within expected time.	Draft
URS-006-03	Capture heart rate from paired device	Android	Low	System shall complete the action without data loss.	Draft

URS Section 7 - Mobile app overview

missing owner

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-007. Owner: Validation. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

7. URS-007-1: App shall process heart rate data and preserve timestamp/timezone context.
- Old requirement copied from web portal project - review if still valid.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-007-01	Sync readings to cloud API	Bluetooth Sensor	TBD	User shall receive clear error message on failure.	Rejected once
URS-007-02	Consent capture and privacy notice	Backend API	Not ranked	Audit/event record shall be generated where applicable.	Approved?
URS-007-03	Validate sensor data range	Notification Service	High	System shall complete the action without data loss.	Pending QA
URS-007-04	Display current BPM with timestamp	Backend API	High	Result must be visible in mobile UI within expected time.	Pending QA

URS Section 8 - User roles

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-008. Owner: Clinical SME. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

8. Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

- Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

URS-008-3: App shall process heart rate data and preserve timestamp/timezone context.

- URS-008-4: App shall process heart rate data and preserve timestamp/timezone context.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-008-01	Display current BPM with timestamp	Notification Service	High	Result must be visible in mobile UI within expected time.	Need SME
URS_8.2	Sync readings to cloud API	Bluetooth Sensor	Not ranked	Data shall be encrypted in transit and at rest.	Approved?
URS-008-03	Export readings as PDF/CSV	Cloud Sync	TBD	Audit/event record shall be generated where applicable.	Pending QA

URS Section 9 - Regulatory notes

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-009. Owner: Validation. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

Unnumbered note - check sensor disconnect behavior during active monitoring.

9. Old requirement copied from web portal project - review if still valid.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS_9.1	Store readings securely on device	Bluetooth Sensor	Low	System shall complete the action without data loss.	Approved?
URS-009-02	Show trend chart for 7/30/90 days	Android/iOS	Low	User shall receive clear error message on failure.	In Review
URS-009-03	Support caregiver view	Android	Medium	System shall complete the action without data loss.	Rejected once
URS-009-04	Audit user actions	Notification Service	Medium	Result must be visible in mobile UI within expected time.	Pending QA

MIXED TRACEABILITY LINE: URS-00X -> FRS?? -> DS component maybe -> IQ/OQ/PQ evidence TBD. This line is intentionally noisy.

URS Section 10 - Data privacy notes

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-010. Owner: Product. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

Old requirement copied from web portal project - review if still valid.

Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

10. URS-010-3: App shall process heart rate data and preserve timestamp/timezone context.

- Old requirement copied from web portal project - review if still valid.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS_10.1	Audit user actions	Bluetooth Sensor	Medium	Data shall be encrypted in transit and at rest.	Need SME
URS-010-02	Consent capture and privacy notice	iOS	Low	Data shall be encrypted in transit and at rest.	Need SME
URS-010-03	Display current BPM with timestamp	Notification Service	Low	Result must be visible in mobile UI within expected time.	Rejected once
URS-010-04	Biometric login option	Local DB	Not ranked	System shall complete the action without data loss.	Draft

URS Section 11 - High level assumptions

??

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-011. Owner: QA. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

11. Old requirement copied from web portal project - review if still valid.

Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

12. For iOS only? For Android only? unclear; parser should capture platform if visible.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-011-01	Support caregiver view	Bluetooth Sensor	Low	Audit/event record shall be generated where applicable.	Pending QA
URS-011-02	Show trend chart for 7/30/90 days	Backend API	TBD	Result must be visible in mobile UI within expected time.	Rejected once
URS_11.3	Support caregiver view	Android	TBD	Audit/event record shall be generated where applicable.	Pending QA
URS-011-04	Battery and Bluetooth warning	Android	Medium	Result must be visible in mobile UI within expected time.	Approved?
URS-011-05	Manual heart rate entry when device unavailable	Notification Service	Low	System shall complete the action without data loss.	Pending QA

URS Section 12 - Cover / uncontrolled draft

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-012. Owner: QA. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

13. Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

URS-012-3: App shall process heart rate data and preserve timestamp/timezone context.

Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-012-01	Show trend chart for 7/30/90 days	Backend API	Medium	Result must be visible in mobile UI within expected time.	Approved?
URS-012-02	Store readings securely on device	Backend API	Low	System shall complete the action without data loss.	Pending QA
URS-012-03	Handle offline mode	iOS	TBD	System shall complete the action without data loss.	Draft
URS-012-04	Capture heart rate from paired device	Android	Not ranked	TBD by clinical SME - intentionally incomplete.	Rejected once
URS-012-05	Biometric login option	Android/iOS	Not ranked	Data shall be encrypted in transit and at rest.	Approved?

URS Section 13 - Abbreviations mixed list

RAG TEST CHUNK

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-013. Owner: Clinical SME. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

- Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

14. For iOS only? For Android only? unclear; parser should capture platform if visible.

URS-013-3: App shall process heart rate data and preserve timestamp/timezone context.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS_13.1	Battery and Bluetooth warning	Local DB	TBD	Data shall be encrypted in transit and at rest.	Approved?
URS-013-02	Store readings securely on device	Bluetooth Sensor	Low	System shall complete the action without data loss.	Pending QA
URS-013-03	Consent capture and privacy notice	Bluetooth Sensor	High	Audit/event record shall be generated where applicable.	Need SME
URS_13.4	Support caregiver view	Local DB	High	Audit/event record shall be generated where applicable.	Draft

Random inserted note: duplicate title appears again below.

URS Section 13 - Abbreviations mixed list

URS Section 14 - Document purpose

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-014. Owner: Clinical SME. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

15. Old requirement copied from web portal project - review if still valid.

- Old requirement copied from web portal project - review if still valid.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-014-01	Store readings securely on device	Notification Service	Not ranked	Data shall be encrypted in transit and at rest.	In Review
URS-014-02	Consent capture and privacy notice	Cloud Sync	Medium	User shall receive clear error message on failure.	Rejected once
URS-014-03	Generate high/low heart-rate alert	Notification Service	High	TBD by clinical SME - intentionally incomplete.	Need SME
URS-014-04	Generate high/low heart-rate alert	Android	High	Audit/event record shall be generated where applicable.	Need SME

URS Section 15 - Evidence placeholder

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-015. Owner: Product. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

Old requirement copied from web portal project - review if still valid.

For iOS only? For Android only? unclear; parser should capture platform if visible.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS_15.1	Store readings securely on device	iOS	Not ranked	Data shall be encrypted in transit and at rest.	Pending QA
URS_15.2	Handle offline mode	Cloud Sync	High	System shall complete the action without data loss.	Approved?
URS-015-03	Manual heart rate entry when device unavailable	Backend API	Not ranked	System shall complete the action without data loss.	Pending QA
URS_15.4	Show trend chart for 7/30/90 days	Android/iOS	High	System shall complete the action without data loss.	In Review
URS-015-05	Notification retry and suppression	Android	Not ranked	Audit/event record shall be generated where applicable.	Rejected once

URS Section 16 - UI behavior

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-016. Owner: Mobile Lead. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

16. For iOS only? For Android only? unclear; parser should capture platform if visible.

URS-016-2: App shall process heart rate data and preserve timestamp/timezone context.

Old requirement copied from web portal project - review if still valid.

- For iOS only? For Android only? unclear; parser should capture platform if visible.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-016-01	Handle offline mode	Android/iOS	Not ranked	System shall complete the action without data loss.	Need SME
URS_16.2	Show trend chart for 7/30/90 days	iOS	Low	Audit/event record shall be generated where applicable.	Rejected once
URS-016-03	Support caregiver view	iOS	Medium	User shall receive clear error message on failure.	Pending QA
URS-016-04	Handle offline mode	iOS	High	Data shall be encrypted in transit and at rest.	Need SME

URS Section 17 - Security and privacy

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-017. Owner: Product. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

17. URS-017-1: App shall process heart rate data and preserve timestamp/timezone context.

Old requirement copied from web portal project - review if still valid.

Old requirement copied from web portal project - review if still valid.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-017-01	Generate high/low heart-rate alert	Notification Service	TBD	Result must be visible in mobile UI within expected time.	In Review
URS-017-02	Show trend chart for 7/30/90 days	Bluetooth Sensor	Not ranked	TBD by clinical SME - intentionally incomplete.	Pending QA
URS-017-03	Show trend chart for 7/30/90 days	Android/iOS	TBD	User shall receive clear error message on failure.	Draft

URS Section 18 - Bluetooth edge cases

OCR noisy line

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-018. Owner: Clinical SME. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

- Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

- 18. URS-018-2: App shall process heart rate data and preserve timestamp/timezone context.
- 19. For iOS only? For Android only? unclear; parser should capture platform if visible.

Unnumbered note - check sensor disconnect behavior during active monitoring.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-018-01	Audit user actions	Android/iOS	Medium	System shall complete the action without data loss.	Draft
URS-018-02	Display current BPM with timestamp	iOS	TBD	Data shall be encrypted in transit and at rest.	In Review
URS_18.3	Biometric login option	Notification Service	High	Audit/event record shall be generated where applicable.	Pending QA
URS-018-04	Manual heart rate entry when device unavailable	Android/iOS	Medium	User shall receive clear error message on failure.	Pending QA

MIXED TRACEABILITY LINE: URS-00X -> FRS?? -> DS component maybe -> IQ/OQ/PQ evidence TBD. This line is intentionally noisy.

URS Section 19 - Audit trail mapping

REVIEW-LATER

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-019. Owner: QA. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

Unnumbered note - check sensor disconnect behavior during active monitoring.

- Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

20. URS-019-3: App shall process heart rate data and preserve timestamp/timezone context.

21. URS-019-4: App shall process heart rate data and preserve timestamp/timezone context.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-019-01	Manual heart rate entry when device unavailable	Notification Service	Medium	Result must be visible in mobile UI within expected time.	Pending QA
URS-019-02	Display current BPM with timestamp	Bluetooth Sensor	Low	Result must be visible in mobile UI within expected time.	In Review
URS-019-03	Generate high/low heart-rate alert	iOS	Medium	Data shall be encrypted in transit and at rest.	Approved?
URS-019-04	Display current BPM with timestamp	Android/iOS	Not ranked	TBD by clinical SME - intentionally incomplete.	Approved?

URS Section 20 - Evidence placeholder

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-020. Owner: Mobile Lead. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

For iOS only? For Android only? unclear; parser should capture platform if visible.

- URS-020-2: App shall process heart rate data and preserve timestamp/timezone context.
- URS-020-3: App shall process heart rate data and preserve timestamp/timezone context.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-020-01	Audit user actions	Backend API	TBD	Audit/event record shall be generated where applicable.	Need SME
URS_20.2	Sync readings to cloud API	Bluetooth Sensor	Low	Result must be visible in mobile UI within expected time.	In Review
URS_20.3	Notification retry and suppression	Notification Service	Not ranked	User shall receive clear error message on failure.	In Review
URS-020-04	Export readings as PDF/CSV	Android/iOS	TBD	Result must be visible in mobile UI within expected time.	Draft

URS Section 21 - Evidence placeholder

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-021. Owner: Clinical SME. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

URS-021-1: App shall process heart rate data and preserve timestamp/timezone context.

- URS-021-2: App shall process heart rate data and preserve timestamp/timezone context.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-021-01	Support caregiver view	Backend API	Medium	Result must be visible in mobile UI within expected time.	Need SME
URS_21.2	Sync readings to cloud API	iOS	Not ranked	Data shall be encrypted in transit and at rest.	In Review
URS-021-03	Audit user actions	Bluetooth Sensor	Medium	TBD by clinical SME - intentionally incomplete.	Need SME
URS-021-04	Display current BPM with timestamp	Android	Medium	System shall complete the action without data loss.	In Review

URS Section 22 - Security and privacy

missing owner

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-022. Owner: Mobile Lead. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

- URS-022-1: App shall process heart rate data and preserve timestamp/timezone context.
- Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-022-01	Capture heart rate from paired device	Android/iOS	TBD	Result must be visible in mobile UI within expected time.	In Review
URS_22.2	Notification retry and suppression	Notification Service	Low	Result must be visible in mobile UI within expected time.	Rejected once
URS-022-03	Battery and Bluetooth warning	Backend API	Not ranked	System shall complete the action without data loss.	Rejected once

URS Section 23 - UI behavior

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-023. Owner: Product. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

- 22. For iOS only? For Android only? unclear; parser should capture platform if visible.
- 23. For iOS only? For Android only? unclear; parser should capture platform if visible.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-023-01	Notification retry and suppression	Backend API	High	TBD by clinical SME - intentionally incomplete.	Need SME
URS_23.2	Audit user actions	Cloud Sync	Low	Audit/event record shall be generated where applicable.	Pending QA
URS_23.3	Export readings as PDF/CSV	Android	Not ranked	User shall receive clear error message on failure.	Rejected once
URS-023-04	Generate high/low heart-rate alert	Android	Medium	TBD by clinical SME - intentionally incomplete.	Pending QA
URS-023-05	Biometric login option	iOS	Medium	Result must be visible in mobile UI within expected time.	Need SME

URS Section 24 - Security and privacy

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-024. Owner: QA. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

- For iOS only? For Android only? unclear; parser should capture platform if visible.

24. Old requirement copied from web portal project - review if still valid.

Old requirement copied from web portal project - review if still valid.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-024-01	Export readings as PDF/CSV	iOS	High	TBD by clinical SME - intentionally incomplete.	In Review
URS-024-02	Generate high/low heart-rate alert	Bluetooth Sensor	TBD	Result must be visible in mobile UI within expected time.	Approved?
URS-024-03	Sync readings to cloud API	Backend API	Low	Result must be visible in mobile UI within expected time.	In Review

URS Section 25 - Bluetooth edge cases

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-025. Owner: QA. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

Unnumbered note - check sensor disconnect behavior during active monitoring.

- Old requirement copied from web portal project - review if still valid.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-025-01	Manual heart rate entry when device unavailable	Cloud Sync	TBD	Data shall be encrypted in transit and at rest.	Need SME
URS_25.2	Store readings securely on device	Bluetooth Sensor	High	TBD by clinical SME - intentionally incomplete.	Rejected once
URS-025-03	Generate high/low heart-rate alert	Local DB	Medium	User shall receive clear error message on failure.	Approved?

URS Section 26 - Test condition table

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-026. Owner: Mobile Lead. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

- 25. Old requirement copied from web portal project - review if still valid.
- 26. URS-026-2: App shall process heart rate data and preserve timestamp/timezone context.

Unnumbered note - check sensor disconnect behavior during active monitoring.

- 27. Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-026-01	Consent capture and privacy notice	Bluetooth Sensor	High	Audit/event record shall be generated where applicable.	Need SME
URS-026-02	Support caregiver view	Bluetooth Sensor	Medium	TBD by clinical SME - intentionally incomplete.	Need SME
URS-026-03	Battery and Bluetooth warning	iOS	Not ranked	User shall receive clear error message on failure.	In Review

MIXED TRACEABILITY LINE: URS-00X -> FRS?? -> DS component maybe -> IQ/OQ/PQ evidence TBD. This line is intentionally noisy.

URS Section 46 - Repeated requirement block

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-046. Owner: Product. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

- URS-046-2: App shall process heart rate data and preserve timestamp/timezone context.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-046-01	Validate sensor data range	Android/iOS	TBD	Audit/event record shall be generated where applicable.	In Review
URS_46.2	Capture heart rate from paired device	Android/iOS	High	System shall complete the action without data loss.	Rejected once
URS-046-03	Battery and Bluetooth warning	Local DB	High	User shall receive clear error message on failure.	Pending QA
URS-046-04	Audit user actions	Notification Service	Low	Result must be visible in mobile UI within expected time.	Approved?

URS Section 47 - Alert workflow

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-047. Owner: Product. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

41. Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-047-01	Export readings as PDF/CSV	Backend API	Not ranked	Audit/event record shall be generated where applicable.	Rejected once
URS-047-02	Consent capture and privacy notice	Bluetooth Sensor	TBD	TBD by clinical SME - intentionally incomplete.	Approved?
URS_47.3	Show trend chart for 7/30/90 days	Android	Not ranked	Audit/event record shall be generated where applicable.	Approved?

URS Section 48 - Security and privacy

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-048. Owner: Mobile Lead. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

- Unnumbered note - check sensor disconnect behavior during active monitoring.

For iOS only? For Android only? unclear; parser should capture platform if visible.

- Old requirement copied from web portal project - review if still valid.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-048-01	Generate high/low heart-rate alert	Android/iOS	Not ranked	Data shall be encrypted in transit and at rest.	In Review
URS-048-02	Notification retry and suppression	Android/iOS	Low	User shall receive clear error message on failure.	Approved?
URS-048-03	Battery and Bluetooth warning	Notification Service	High	TBD by clinical SME - intentionally incomplete.	Draft

URS Section 49 - UI behavior

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-049. Owner: TBD. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

Unnumbered note - check sensor disconnect behavior during active monitoring.

- Unnumbered note - check sensor disconnect behavior during active monitoring.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-049-01	Audit user actions	Bluetooth Sensor	Medium	Audit/event record shall be generated where applicable.	Draft
URS_49.2	Display current BPM with timestamp	Cloud Sync	High	TBD by clinical SME - intentionally incomplete.	Pending QA
URS-049-03	Biometric login option	Android	Not ranked	Result must be visible in mobile UI within expected time.	Draft
URS_49.4	Notification retry and suppression	Cloud Sync	Low	Audit/event record shall be generated where applicable.	Approved?

URS Section 50 - Mobile platform variation

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-050. Owner: TBD. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

- 42. Unnumbered note - check sensor disconnect behavior during active monitoring.
- 43. Old requirement copied from web portal project - review if still valid.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-050-01	Sync readings to cloud API	Cloud Sync	High	System shall complete the action without data loss.	Draft
URS-050-02	Audit user actions	Backend API	Low	System shall complete the action without data loss.	Draft
URS-050-03	Manual heart rate entry when device unavailable	iOS	Low	User shall receive clear error message on failure.	Draft
URS-050-04	Handle offline mode	Notification Service	Medium	System shall complete the action without data loss.	In Review

URS Section 51 - Alert workflow

??

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-051. Owner: TBD. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

- Unnumbered note - check sensor disconnect behavior during active monitoring.
- For iOS only? For Android only? unclear; parser should capture platform if visible.

44. For iOS only? For Android only? unclear; parser should capture platform if visible.

45. URS-051-4: App shall process heart rate data and preserve timestamp/timezone context.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-051-01	Sync readings to cloud API	iOS	Not ranked	User shall receive clear error message on failure.	In Review
URS-051-02	Validate sensor data range	Android	Low	Audit/event record shall be generated where applicable.	Approved?
URS_51.3	Biometric login option	Android/iOS	Medium	Data shall be encrypted in transit and at rest.	Approved?
URS_51.4	Manual heart rate entry when device unavailable	Notification Service	Medium	System shall complete the action without data loss.	In Review
URS-051-05	Biometric login option	Android	High	User shall receive clear error message on failure.	In Review

URS Section 52 - Bluetooth edge cases

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-052. Owner: Product. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

- Unnumbered note - check sensor disconnect behavior during active monitoring.

46. For iOS only? For Android only? unclear; parser should capture platform if visible.
47. URS-052-3: App shall process heart rate data and preserve timestamp/timezone context.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS_52.1	Show trend chart for 7/30/90 days	Notification Service	High	Result must be visible in mobile UI within expected time.	In Review
URS-052-02	Audit user actions	Notification Service	Low	Data shall be encrypted in transit and at rest.	In Review
URS-052-03	Biometric login option	Cloud Sync	Low	TBD by clinical SME - intentionally incomplete.	Rejected once
URS-052-04	Battery and Bluetooth warning	Android/iOS	TBD	Audit/event record shall be generated where applicable.	Draft

URS-067-04	Consent capture and privacy notice	iOS	Medium	Data shall be encrypted in transit and at rest.	Rejected once
URS_67.5	Notification retry and suppression	Cloud Sync	Medium	TBD by clinical SME - intentionally incomplete.	Approved?

URS Section 68 - Repeated requirement block

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-068. Owner: Product. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

- URS-068-1: App shall process heart rate data and preserve timestamp/timezone context.

64. Unnumbered note - check sensor disconnect behavior during active monitoring.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-068-01	Handle offline mode	Cloud Sync	High	TBD by clinical SME - intentionally incomplete.	Need SME
URS_68.2	Display current BPM with timestamp	Notification Service	High	Data shall be encrypted in transit and at rest.	Pending QA
URS-068-03	Consent capture and privacy notice	Local DB	TBD	Data shall be encrypted in transit and at rest.	Pending QA
URS_68.4	Audit user actions	Android	Low	Audit/event record shall be generated where applicable.	Rejected once
URS-068-05	Audit user actions	Bluetooth Sensor	High	User shall receive clear error message on failure.	Pending QA

URS Section 69 - Alert workflow

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-069. Owner: Product. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

- 65. For iOS only? For Android only? unclear; parser should capture platform if visible.
- 66. URS-069-2: App shall process heart rate data and preserve timestamp/timezone context.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-069-01	Handle offline mode	Local DB	High	Data shall be encrypted in transit and at rest.	Need SME
URS-069-02	Battery and Bluetooth warning	Notification Service	TBD	TBD by clinical SME - intentionally incomplete.	In Review
URS_69.3	Capture heart rate from paired device	Notification Service	High	TBD by clinical SME - intentionally incomplete.	In Review

URS Section 70 - Mobile platform variation

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-070. Owner: Mobile Lead. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

67. URS-070-1: App shall process heart rate data and preserve timestamp/timezone context.

URS-070-2: App shall process heart rate data and preserve timestamp/timezone context.

68. URS-070-3: App shall process heart rate data and preserve timestamp/timezone context.

- URS-070-4: App shall process heart rate data and preserve timestamp/timezone context.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-070-01	Audit user actions	Android/iOS	Not ranked	TBD by clinical SME - intentionally incomplete.	Need SME
URS-070-02	Battery and Bluetooth warning	Cloud Sync	Low	Audit/event record shall be generated where applicable.	Draft
URS-070-03	Notification retry and suppression	Local DB	High	TBD by clinical SME - intentionally incomplete.	Need SME

URS Section 71 - Alert workflow

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-071. Owner: Clinical SME. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

69. Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

70. For iOS only? For Android only? unclear; parser should capture platform if visible.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS_71.1	Battery and Bluetooth warning	Notification Service	TBD	TBD by clinical SME - intentionally incomplete.	In Review
URS-071-02	Show trend chart for 7/30/90 days	Bluetooth Sensor	Low	TBD by clinical SME - intentionally incomplete.	Rejected once
URS-071-03	Audit user actions	iOS	Low	Result must be visible in mobile UI within expected time.	Rejected once
URS-071-04	Support caregiver view	Backend API	Not ranked	Data shall be encrypted in transit and at rest.	Rejected once

URS Section 72 - Requirement details

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-072. Owner: Validation. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

71. URS-072-1: App shall process heart rate data and preserve timestamp/timezone context.

Unnumbered note - check sensor disconnect behavior during active monitoring.

Unnumbered note - check sensor disconnect behavior during active monitoring.

72. URS-072-4: App shall process heart rate data and preserve timestamp/timezone context.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-072-01	Show trend chart for 7/30/90 days	iOS	TBD	System shall complete the action without data loss.	Draft
URS-072-02	Sync readings to cloud API	Android	Not ranked	Audit/event record shall be generated where applicable.	Draft
URS-072-03	Audit user actions	Local DB	Low	System shall complete the action without data loss.	Pending QA

MIXED TRACEABILITY LINE: URS-00X -> FRS?? -> DS component maybe -> IQ/OQ/PQ evidence TBD. This line is intentionally noisy.

URS Section 73 - Requirement details

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-073. Owner: Mobile Lead. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

Old requirement copied from web portal project - review if still valid.

73. Old requirement copied from web portal project - review if still valid.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS_73.1	Show trend chart for 7/30/90 days	Backend API	High	TBD by clinical SME - intentionally incomplete.	Approved?
URS-073-02	Display current BPM with timestamp	Notification Service	Low	System shall complete the action without data loss.	Approved?
URS_73.3	Export readings as PDF/CSV	Bluetooth Sensor	Medium	Audit/event record shall be generated where applicable.	Draft
URS-073-04	Display current BPM with timestamp	iOS	TBD	User shall receive clear error message on failure.	Need SME
URS_73.5	Handle offline mode	Bluetooth Sensor	Not ranked	Result must be visible in mobile UI within expected time.	Rejected once

URS Section 74 - Open questions

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-074. Owner: Clinical SME. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

Unnumbered note - check sensor disconnect behavior during active monitoring.

Old requirement copied from web portal project - review if still valid.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-074-01	Manual heart rate entry when device unavailable	Bluetooth Sensor	Not ranked	TBD by clinical SME - intentionally incomplete.	Need SME
URS-074-02	Support caregiver view	Backend API	Medium	Audit/event record shall be generated where applicable.	Approved?
URS-074-03	Store readings securely on device	Local DB	High	Result must be visible in mobile UI within expected time.	Rejected once
URS_74.4	Capture heart rate from paired device	Bluetooth Sensor	Not ranked	User shall receive clear error message on failure.	Need SME
URS-074-05	Capture heart rate from paired device	Android	High	Result must be visible in mobile UI within expected time.	Approved?

URS Section 75 - Audit trail mapping

manual note

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-075. Owner: Mobile Lead. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

Old requirement copied from web portal project - review if still valid.

- For iOS only? For Android only? unclear; parser should capture platform if visible.

74. Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

- Old requirement copied from web portal project - review if still valid.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-075-01	Capture heart rate from paired device	Cloud Sync	Medium	Result must be visible in mobile UI within expected time.	Approved?
URS-075-02	Battery and Bluetooth warning	Backend API	Not ranked	User shall receive clear error message on failure.	Need SME
URS_75.3	Notification retry and suppression	Bluetooth Sensor	Not ranked	System shall complete the action without data loss.	In Review

URS Section 76 - Evidence placeholder

RAG TEST CHUNK

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-076. Owner: Product. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

URS-076-2: App shall process heart rate data and preserve timestamp/timezone context.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-076-01	Notification retry and suppression	Android/iOS	TBD	User shall receive clear error message on failure.	In Review
URS-076-02	Consent capture and privacy notice	Cloud Sync	Medium	TBD by clinical SME - intentionally incomplete.	Need SME
URS-076-03	Handle offline mode	Cloud Sync	High	Result must be visible in mobile UI within expected time.	Draft

URS Section 77 - API behavior

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-077. Owner: Product. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

- For iOS only? For Android only? unclear; parser should capture platform if visible.

75. Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-077-01	Capture heart rate from paired device	Android/iOS	TBD	Result must be visible in mobile UI within expected time.	Draft
URS-077-02	Notification retry and suppression	Local DB	TBD	User shall receive clear error message on failure.	Need SME
URS-077-03	Show trend chart for 7/30/90 days	Cloud Sync	Low	Data shall be encrypted in transit and at rest.	Need SME
URS-077-04	Capture heart rate from paired device	Cloud Sync	Low	Data shall be encrypted in transit and at rest.	Rejected once
URS-077-05	Display current BPM with timestamp	Bluetooth Sensor	TBD	Result must be visible in mobile UI within expected time.	Pending QA

URS Section 78 - Exception handling

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-078. Owner: Product. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

- Old requirement copied from web portal project - review if still valid.

URS-078-2: App shall process heart rate data and preserve timestamp/timezone context.

For iOS only? For Android only? unclear; parser should capture platform if visible.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-078-01	Generate high/low heart-rate alert	Cloud Sync	High	Result must be visible in mobile UI within expected time.	Pending QA
URS-078-02	Show trend chart for 7/30/90 days	iOS	TBD	TBD by clinical SME - intentionally incomplete.	Approved?
URS-078-03	Export readings as PDF/CSV	Bluetooth Sensor	Not ranked	Data shall be encrypted in transit and at rest.	Need SME

The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-090. Owner: Clinical SME. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

For iOS only? For Android only? unclear; parser should capture platform if visible.

Unnumbered note - check sensor disconnect behavior during active monitoring.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-090-01	Consent capture and privacy notice	Bluetooth Sensor	Low	User shall receive clear error message on failure.	In Review
URS_90.2	Validate sensor data range	Android	Not ranked	Audit/event record shall be generated where applicable.	In Review
URS-090-03	Generate high/low heart-rate alert	Bluetooth Sensor	TBD	Data shall be encrypted in transit and at rest.	In Review
URS-090-04	Store readings securely on device	Android	TBD	Result must be visible in mobile UI within expected time.	Draft

MIXED TRACEABILITY LINE: URS-00X -> FRS?? -> DS component maybe -> IQ/OQ/PQ evidence TBD. This line is intentionally noisy.

URS Section 91 - UI behavior

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-091. Owner: Clinical SME. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

- Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

Unnumbered note - check sensor disconnect behavior during active monitoring.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-091-01	Notification retry and suppression	Notification Service	Low	System shall complete the action without data loss.	Need SME
URS_91.2	Handle offline mode	Notification Service	TBD	Data shall be encrypted in transit and at rest.	Pending QA
URS-091-03	Battery and Bluetooth warning	Bluetooth Sensor	TBD	TBD by clinical SME - intentionally incomplete.	Rejected once
URS_91.4	Manual heart rate entry when device unavailable	Local DB	High	Data shall be encrypted in transit and at rest.	Draft

Random inserted note: duplicate title appears again below.

URS Section 91 - UI behavior

URS Section 92 - Data handling notes

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-092. Owner: Clinical SME. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

86. Old requirement copied from web portal project - review if still valid.

Old requirement copied from web portal project - review if still valid.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS_92.1	Show trend chart for 7/30/90 days	Bluetooth Sensor	Low	Audit/event record shall be generated where applicable.	Rejected once
URS-092-02	Notification retry and suppression	iOS	Low	System shall complete the action without data loss.	Rejected once
URS-092-03	Audit user actions	Notification Service	Low	TBD by clinical SME - intentionally incomplete.	In Review
URS-092-04	Consent capture and privacy notice	Local DB	Medium	System shall complete the action without data loss.	Draft
URS-092-05	Display current BPM with timestamp	Android	Not ranked	System shall complete the action without data loss.	Approved?

URS Section 93 - Audit trail mapping

manual note

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-093. Owner: Validation. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

87. For iOS only? For Android only? unclear; parser should capture platform if visible.

- For iOS only? For Android only? unclear; parser should capture platform if visible.

88. URS-093-3: App shall process heart rate data and preserve timestamp/timezone context.

89. For iOS only? For Android only? unclear; parser should capture platform if visible.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS_93.1	Export readings as PDF/CSV	Backend API	High	TBD by clinical SME - intentionally incomplete.	Approved?
URS-093-02	Support caregiver view	Local DB	Not ranked	User shall receive clear error message on failure.	Need SME
URS-093-03	Sync readings to cloud API	Backend API	Not ranked	User shall receive clear error message on failure.	Rejected once

URS Section 94 - Alert workflow

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-094. Owner: Product. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

- Unnumbered note - check sensor disconnect behavior during active monitoring.
90. Old requirement copied from web portal project - review if still valid.
91. Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-094-01	Manual heart rate entry when device unavailable	Backend API	High	User shall receive clear error message on failure.	Approved?
URS-094-02	Support caregiver view	iOS	TBD	TBD by clinical SME - intentionally incomplete.	In Review
URS_94.3	Generate high/low heart-rate alert	Bluetooth Sensor	Not ranked	Audit/event record shall be generated where applicable.	Approved?
URS-094-04	Display current BPM with timestamp	Bluetooth Sensor	Medium	Audit/event record shall be generated where applicable.	Rejected once
URS_94.5	Capture heart rate from paired device	Android	Low	Data shall be encrypted in transit and at rest.	Rejected once

URS Section 95 - Open questions

missing owner

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-095. Owner: Product. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

Old requirement copied from web portal project - review if still valid.

URS-095-2: App shall process heart rate data and preserve timestamp/timezone context.

- Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.
- Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-095-01	Generate high/low heart-rate alert	Notification Service	TBD	TBD by clinical SME - intentionally incomplete.	Rejected once
URS_95.2	Consent capture and privacy notice	Cloud Sync	Low	User shall receive clear error message on failure.	In Review
URS-095-03	Display current BPM with timestamp	Android	Not ranked	TBD by clinical SME - intentionally incomplete.	In Review
URS_95.4	Biometric login option	iOS	TBD	Result must be visible in mobile UI within expected time.	Rejected once
URS-095-05	Handle offline mode	iOS	Medium	Data shall be encrypted in transit and at rest.	Need SME

URS Section 96 - Requirement details

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-096. Owner: Mobile Lead. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

- Unnumbered note - check sensor disconnect behavior during active monitoring.
- URS-096-2: App shall process heart rate data and preserve timestamp/timezone context.

For iOS only? For Android only? unclear; parser should capture platform if visible.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-096-01	Biometric login option	Bluetooth Sensor	Not ranked	TBD by clinical SME - intentionally incomplete.	Rejected once
URS-096-02	Manual heart rate entry when device unavailable	Backend API	TBD	TBD by clinical SME - intentionally incomplete.	Draft
URS-096-03	Export readings as PDF/CSV	Backend API	Medium	Result must be visible in mobile UI within expected time.	In Review
URS-096-04	Display current BPM with timestamp	Cloud Sync	Not ranked	System shall complete the action without data loss.	Pending QA
URS_96.5	Audit user actions	Android	TBD	System shall complete the action without data loss.	Approved?

URS Section 97 - API behavior

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-097. Owner: Product. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

Unnumbered note - check sensor disconnect behavior during active monitoring.

For iOS only? For Android only? unclear; parser should capture platform if visible.

- URS-097-3: App shall process heart rate data and preserve timestamp/timezone context.
- Old requirement copied from web portal project - review if still valid.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-097-01	Display current BPM with timestamp	Backend API	TBD	Result must be visible in mobile UI within expected time.	Approved?
URS-097-02	Sync readings to cloud API	Backend API	Not ranked	Audit/event record shall be generated where applicable.	Pending QA
URS-097-03	Sync readings to cloud API	Android/iOS	Not ranked	TBD by clinical SME - intentionally incomplete.	In Review
URS-097-04	Notification retry and suppression	Notification Service	Low	System shall complete the action without data loss.	Draft

URS Section 98 - Requirement details

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-098. Owner: Validation. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

- 92. Unnumbered note - check sensor disconnect behavior during active monitoring.
- 93. Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

URS-098-3: App shall process heart rate data and preserve timestamp/timezone context.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-098-01	Generate high/low heart-rate alert	Local DB	Medium	Audit/event record shall be generated where applicable.	Approved?
URS-098-02	Display current BPM with timestamp	iOS	High	Result must be visible in mobile UI within expected time.	Approved?
URS_98.3	Validate sensor data range	Bluetooth Sensor	Low	Data shall be encrypted in transit and at rest.	Approved?
URS-098-04	Biometric login option	iOS	Not ranked	System shall complete the action without data loss.	Pending QA

URS Section 99 - API behavior

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-099. Owner: Product. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

94. Old requirement copied from web portal project - review if still valid.

- Old requirement copied from web portal project - review if still valid.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-099-01	Notification retry and suppression	Backend API	Low	User shall receive clear error message on failure.	In Review
URS-099-02	Battery and Bluetooth warning	Bluetooth Sensor	Low	System shall complete the action without data loss.	In Review
URS-099-03	Audit user actions	Android/iOS	Low	Result must be visible in mobile UI within expected time.	Draft
URS_99.4	Sync readings to cloud API	Local DB	Medium	User shall receive clear error message on failure.	Approved?
URS-099-05	Manual heart rate entry when device unavailable	Cloud Sync	High	User shall receive clear error message on failure.	Approved?

MIXED TRACEABILITY LINE: URS-00X -> FRS?? -> DS component maybe -> IQ/OQ/PQ evidence TBD. This line is intentionally noisy.

URS Section 100 - Audit trail mapping

This page belongs to User Requirements Specification for the Heart Rate Monitor mobile application. The application supports Android and iOS users, paired heart-rate sensors, manual BPM entry, trend review, alerts, data export, and controlled access. This block intentionally includes uneven numbering, repeated labels, partial owner fields, and mixed wording so an AI traceability/RAG engine can be tested against non-perfect documents. Page marker: URS-100. Owner: QA. Important terms: BPM, sensor pairing, low alert, high alert, caregiver, audit trail, local cache, encrypted sync, consent, export, notification.

95. URS-100-1: App shall process heart rate data and preserve timestamp/timezone context.

Acceptance: expected result to be confirmed by QA; evidence screenshot may be attached later.

ID	Requirement / Test / Step	Area	Risk	Acceptance / Expected Result	Status
URS-100-01	Biometric login option	Bluetooth Sensor	Low	Result must be visible in mobile UI within expected time.	Need SME
URS-100-02	Battery and Bluetooth warning	Notification Service	TBD	Audit/event record shall be generated where applicable.	Pending QA
URS_100.3	Capture heart rate from paired device	Backend API	Not ranked	Data shall be encrypted in transit and at rest.	Pending QA
URS_100.4	Notification retry and suppression	Bluetooth Sensor	Medium	User shall receive clear error message on failure.	Pending QA
